Center of Excellence in Regulatory Tobacco Science
(OSU-CERTS)

Citing OSU-CERTS in Publications

Each publication, press release or other document resulting from research supported by OSU-CERTS, must include acknowledgement of NIH award support and a disclaimer. Prior to issuing a press release concerning the outcome of OSU-CERTS research, the National Cancer Institute must be notified in advance to allow for coordination.

**OSU-CERTS citation for research publications:**
“Research reported in this publication was supported by grant number P50CA180908 from the National Cancer Institute of the National Institutes of Health (NIH) and the Food and Drug Administration (FDA) Center for Tobacco Products. The content is solely the responsibility of the authors and does not necessarily represent the official views of the NIH or the FDA.”

**OSU-CERTS citation for general publications:**
“Research reported in this publication was supported by the National Cancer Institute of the National Institutes of Health (NIH) and the Food and Drug Administration (FDA) Center for Tobacco Products. The content is solely the responsibility of the authors and does not necessarily represent the official views of the NIH or the FDA.”

There may be instances where OSU-CERTS provided infrastructure or other support that led to research that is to be published or presented, but does not clearly relate to the specific aims of the OSU-CERTS grant. For example, using data collected by OSU-CERTS for a subsequent secondary data analysis that may not relate directly to tobacco regulatory science. In such cases the funding acknowledgement in any publications should specify the specific part of the project (in this case data collection) that was supported by OSU-CERTS and what part of the work (the subsequent analysis) that was supported from other sources and what those sources were. Likewise, supporting travel for a trainee to present a paper or poster that is not regulatory science is permissible because it is training. However, OSU-CERTS should not be cited as supporting the research itself.
