

Collaborative CPH and COE EH1 and EH2 Faculty Searches for MDSS

Ohio State University College of Public Health Division of Environmental Health Sciences (<http://cph.osu.edu/>) and the College of Engineering Department of Civil, Environmental and Geodetic Engineering (<https://engineering.osu.edu/>) are conducting a joint search for a tenure-track faculty member with expertise in environmental health sciences. The position rank is commensurate with experience.

This position is partially funded by Ohio State's Discovery Themes Initiative ([Discovery.osu.edu](http://discovery.osu.edu)), a significant faculty hiring investment in key thematic areas in which the university can build on its culture of academic collaboration to make a global impact. The successful candidate will be engaged in the Sustainable and Resilient Economy (S&RE) program (<https://discovery.osu.edu/focus-areas/sustainable-economy>) with a highly collaborative interdisciplinary community of scholars that is taking a holistic approach to understanding how production and consumption systems are linked to ecological systems, and how society can achieve more sustainable and resilient development. Candidates who have experience leading or participating in collaborative teams and performing interdisciplinary research that considers interactions among environmental, economic, and social systems are strongly encouraged to apply.

Applicants with expertise in one or more of the following areas are sought: environmental and health impacts of new and existing materials; epigenetics; toxicology; contaminant fate and transport of contaminants; and human exposure and risk assessment. The successful candidate will be responsible for collaborating with other faculty on interdisciplinary research projects, effectively teaching students, supervising and mentoring underrepresented groups and students, and involvement in service within the university and in appropriate professional communities. Rank, salary, and divisional home will be determined by the candidate's credentials. An earned doctoral degree in a related discipline is required.

To apply, please submit your application electronically in the form of a single PDF file attached to an e-mail message addressed to the Sustainability Science Environmental Health Search Committee at CPH-COE_MDSSsearch@osu.edu. The PDF file must include, in this order, a cover letter; curriculum vita; statements of research and teaching interests; the names and contact information of three references; and copies of up to three papers. Review of applications will begin immediately and continue until the positions are filled.

The Ohio State University is committed to establishing a culturally and intellectually diverse environment, encouraging all members of our learning community to reach their full potential. We are responsive to dual-career families and strongly promote work-life balance to support our community members through a suite of institutionalized policies. We are an NSF ADVANCE Institution and a member of the Ohio/Western Pennsylvania/West Virginia Higher Education Recruitment Consortium.
