PUBHMP 7603 – Economic Evaluation of Health Care Programs

Public health professionals, clinicians and administrators are often required to better justify the economic benefits of health care projects. Economic evaluation methods are versatile and used widely to assist in decision making with constrained resources.

The OSU College of Public Health Division of Health Services Management and Policy will offer a new elective course on economic evaluations of health care programs during the Spring 2016 semester.

In this course, we will extensively discuss the rationale for and best practices widely used in health care economic evaluations. Students in health services research, healthcare management, epidemiology, environmental health, and health behavior and health promotion programs will benefit from gaining in-depth knowledge and analytic skills in performing analyses (e.g. medical cost-effectiveness analysis, return-of-investment analysis) using standard software (e.g. TreeAge, Excel).

When: Tuesday & Thursdays 9:35am-10:55am
Where: Derby Hall 048
Course #: PUBHHMP 7603
Instructor: Wendy Xu, Ph.D.
For more information, please contact the instructor (xu.1636@osu.edu).
