This course focuses on specific techniques for measuring outcomes in clinical and health services research studies. The course is appropriate for doctoral students, clinical and translational researchers and trainees, and advanced masters-level students with interest in health care outcomes assessment. The course is designed to provide students with in-depth familiarity of techniques and measurement instruments that are most useful to measure outcomes in such areas as: health status, quality of life, patient satisfaction, pain, depression and other mental health conditions, function and disability, compliance/adherence with treatment, economic and social outcomes, and specialized outcome measures for pediatric, geriatric, and other distinctive populations.

This course meets Thursdays
5:15-7:05 in PAES Building, Room 111

The Course Syllabus is available from the Instructor: adembe@cph.osu.edu
