

# 2023-2024 Curriculum Guide for Master of Science degree program with a specialization in ENVIRONMENTAL PUBLIC HEALTH

The Master of Science (MS) degree in Environmental Sciences is intended for students whose interests in environmental public health are academically oriented rather than directed toward professional practice. MS graduates will have the knowledge and skills to participate in basic and applied research and will have the foundation in Environmental Sciences to enter a research-oriented career. This program is part of the Ohio State Environmental Sciences Graduate Program (ESGP). It is also a natural entry point for students who are qualified to pursue a PhD degree which requires broader scope and depth of content via additional didactic courses and more intensive research emphasis. To reflect this research and academic orientation, the MS degree requires preparation and defense of a hypothesis-based thesis. The MS degree typically can be completed within two years.

Students are assigned a faculty advisor who will provide guidance throughout the program. Students are encouraged to get to know their advisor and meet with them at least twice each semester. This document serves as a resource to be used by the student and the advisor in planning a program with a specialization in EPH, but is not inclusive of all important degree, college(s), and university requirements. This is not considered an on-line degree program; however, students will enroll in a combination of courses designed for on-campus in-person delivery (IP), distance learning (DL), or hybrid (HY). All students are expected to be familiar with the ESGP Handbook: <a href="https://esgp.osu.edu/sites/default/files/2023-06/esgp">https://esgp.osu.edu/sites/default/files/2023-06/esgp</a> 2023-2024 handbook.docx, College of Public Health (CPH) Graduate Student Handbook: <a href="http://cph.osu.edu/students/graduate/handbooks">https://cph.osu.edu/students/graduate/handbooks</a> the Graduate School Handbook <a href="https://gradsch.osu.edu/handbook">https://gradsch.osu.edu/handbook</a> and CPH competencies: <a href="https://go.osu.edu/cphcompetencies">http://go.osu.edu/cphcompetencies</a>.

#### **PROGRAM OF STUDY**

The MS-Environmental Public Health curriculum consists of a minimum of 39 credit hours.

#### **ESGP Required Courses (12 credit hours)**

| ENVSCI 7899 ESGP Seminar | <b>1, 1, 1</b> (3 credit hrs total) |
|--------------------------|-------------------------------------|
|--------------------------|-------------------------------------|

PUBHEHS 6320 Global Health and Environmental Microbiology 3 credit hrs
Physical Science Select from courses in Appendix II 3 credit hrs
Social Sciences & Policy Select from courses in Appendix II 3 credit hrs

## **Public Health Required Courses (15 credit hours)**

| PUBHLTH 6010 | Essentials of Public Health                | 3 credit hrs |
|--------------|--|--------------|
| PUBHBIO 6210 | Applied Biostatistics I                    | 3 credit hrs |
| PUBHEPI 6410 | Principles of Epidemiology                 | 3 credit hrs |
| PUBHEHS 6310 | Principles of Environmental Health Science | 3 credit hrs |
| PUBHEHS 5315 | Principles of Toxicology                   | 3 credit hrs |

## **Electives (3 credit hours)**

With advisor's guidance and approval, select from the list of approved ESGP core courses in Appendix II and/or from list of CPH-EPH courses in Appendix I.

## Thesis (Minimum 9 credit hours)

The thesis is an integral part of the MS degree, allowing the student the opportunity to investigate a topic of personal

interest and importance to the field and to integrate and synthesize from the knowledge and skills presented in the program. Research thesis credit hours are to be taken in the advisor's home department/division (7999).

#### Sample Curriculum Plan for the Master of Science in Environmental Public Health

(THIS IS ONE OPTION, STUDENTS ARE ADVISED TO CONSULT WITH THEIR ADVISOR FOR OTHER OPTIONS)

# **Appendix II Elective Courses in Biological Science**

The objective of this course area is to ensure that students are familiar with the diversity and functioning of organisms and the interactions among species and between organisms and the environment. Because the environmental sciences focus on the relationships between living organisms and their environment, the basic principles of ecology and a solid understanding of ecosystems structure and function is the focus of the ESGP core. This understanding can be gained through coursework that focuses on a particular taxon or a particular kind of ecosystem but must be broadly applicable to any environment.

<sup>\*</sup>students may not use this course to fulfill both the core requirement and an elective requirement

# **Appendix II ESGP Core Courses in Physical Science and Engineering**

The objective of this core area is to provide an understanding of physical structure and processes in which ecosystems must function. Physical structure includes soil, water, air, geological media, climate, nutrients, and contaminants. Physical science processes include movement of "abiotic" matter and energy through ecosystems. Core courses must (1) study fundamental physical, hydrological, chemical, or biogeochemical processes and (2) study and emphasize the effects of physical structure and processes on ecosystem biotic components and function and the interactions between the biotic and abiotic components of the ecosystem.

|                            | ze the effects of physical structure and processes on ecosystem biotic components of the ecosystem. |                | on and th    |

# **Appendix II ESGP Core Courses in Social Sciences and Policy**

The objective of the social science core is to provide an understanding of concepts related to the study of human society and/or individuals and their relationships to the structure and function of the ecosystem(s) of which they are a part. Methodology includes a range of approaches, both qualitative and quantitative. Core social science courses must engage social science in a combined theoretical and/or applied study of a physical, cultural, regulatory, or economic relationship between humans and the natural and physical environment.
